

ABSTRACT OF THE DISCLOSURE

A terminal apparatus obtains desired information from information providers and prints the information in high quality as needed. The terminal adds
5 advertisement information to the desired information, which reduces the cost for obtaining and printing the desired information. The terminal calculates the advertisement fee by counting the number of printing of the advertisement. The terminal charges the user, up
10 to the maximum limit desired, for the information obtained and printed according to the print amount. The terminal allows the information providers to avoid paying the advertisement fee unlimitedly.
